MBNDATA

# APEX Full Stack Developer

The screenshot shows the MBNDATA website. At the top, there's a banner with the text: "Vi bygger software løsninger, yder konsulentbistand og underviser indenfor Oracle og APEX." Below this are three service cards: "IT Konsulentbistand" (with a person icon), "APEX Kursus" (with a graduation cap icon), and "Productivity Apps" (with a cloud icon). Each card has a brief description. At the bottom, there's a section titled "Built with ā'pěks" featuring logos for DOAG, Oracle Certifications (Certified Expert, Certified Associate, Certified Expert, Oracle Application Express Developer), and Oracle Database SQL.

MBNDATA

IT-Konsulerter Kurser Productivity Apps APEX Om MBNDATA

Vi bygger software løsninger, yder konsulentbistand og underviser indenfor Oracle og APEX.

IT Konsulentbistand

APEX Kursus

Productivity Apps

Vores konsulenter er klar til at hjælpe vores kunder godt igennem perioder med spidsbelastninger i den interne IT afdeling. Vi arbejder både med korte og meget lange aftale perioder, hvor konsulanten typisk er placeret hos kunden. Vi hjælper gerne med udviklings & driftsopgaver indenfor: **Oracle Application Express (APEX)**, **Oracle database**, **SQL**, **PL/SQL**, **Oracle E-Business Suite**, **Java** og meget mere.

Oracle Application Express (APEX) har været vores primære værktøj i mange år. Den erfaring vil vi gerne dele med andre, igennem en række APEX kurser som vi udbyder. Kurserne kan tages både **online, eller i kursus lokalet (hos os, ellerude hos vores kunder)**. Kurserne stiller et APEX workspace til rådighed for den enkelte deltager, og indeholder min. 50% hands on Lab øvelser. Kurserne afvikles altid med den nyeste version af APEX (med mindre en anden version ønskes).

Productivity Apps er en række applikationer der leveres med som **en del af Application Express**. Oracle har bygget en række robuste database centriske web applikationer som kan benyttes enten **on-premise eller som cloud baserede løsninger**. Hos MBNDATA kan vi hjælpe med at implementere disse applikationer i virksomheden. Vi kan også yde support på applikationerne samt lave tilpasninger og integrationer til virksomhedens andre løsninger.

# Browser Devtools

The screenshot shows the Oracle Application Express login dialog over a browser window. The dialog features a pencil icon and fields for workspace ('mbndata'), username ('MARTIN@MBNDATA.DK'), and password ('.....'). A 'Remember workspace and username' checkbox is checked. Below the dialog is the Chrome Network tab, which displays a timeline of network requests. The table below lists these requests:

Name	Status	Type	Initiator	Size	Time	Waterfall

# CSS Primer - Selectors

## Selectors

.class { font-weight: bold; }	
div	Element
.class	Class
#id	ID
[disabled]	Attribute
[role="dialog"]	Attribute

## Combinators

.parent .child	Descendant
.parent > .child	Direct descendant
.child + .sibling	Adjacent sibling
.child ~ .sibling	Far sibling

## Pseudo-classes

:target	eg, h2#foo:target
:disabled	
:focus	
:active	
:nth-child(3)	3rd child
:nth-child(3n+2)	2nd child in groups of 3
:nth-child(-n+4)	
:nth-last-child(2)	
:nth-of-type(2)	

## Attribute selectors

[role="dialog"]	= Exact
[class~="box"]	~= Has word
[class = "box"]	= Exact or prefix (eg, value-)
[href\$=".doc"]	\$= Ends in
[class*="-is-"]	*= Contains

## Pseudo-class variations

:first-of-type	
:last-of-type	
:nth-of-type(2)	
:only-of-type	
:first-child	
:last-child	
:nth-child(2)	
:only-child

CSS Properties	
<input type="text"/> Search..	
<b>A</b>	
<a href="#">align-content</a>	Specifies the alignment between the lines inside a flexible container when the items do not use all available space
<a href="#">align-items</a>	Specifies the alignment for items inside a flexible container
<a href="#">align-self</a>	Specifies the alignment for selected items inside a flexible container
<a href="#">all</a>	Resets all properties (except unicode-bidi and direction)
<a href="#">animation</a>	A shorthand property for all the <i>animation-*</i> properties
<a href="#">animation-delay</a>	Specifies a delay for the start of an animation
<a href="#">animation-direction</a>	Specifies whether an animation should be played forwards, backwards or in alternate cycles
<a href="#">animation-duration</a>	Specifies how long an animation should take to complete one cycle
<a href="#">animation-fill-mode</a>	Specifies a style for the element when the animation is not playing (before it starts, after it ends, or both)
<a href="#">animation-iteration-count</a>	Specifies the number of times an animation should be played
<a href="#">animation-name</a>	Specifies a name for the @keyframes animation
<a href="#">animation-play-state</a>	Specifies whether the animation is running or paused
<a href="#">animation-timing-function</a>	Specifies the speed curve of an animation
<b>B</b>	
<a href="#">backface-visibility</a>	Defines whether or not the back face of an element should be visible when facing the user

# SASS Primer

<https://sass-lang.com/guide>

```
sass --watch app/sass:public/stylesheets
```

Sass would watch all files in the `app/sass` folder for changes, and compile CSS to the `public/stylesheets` folder.

## Variables

Think of variables as a way to store information that you want to reuse throughout your stylesheet. You can store things like colors, font stacks, or any CSS value you think you'll want to reuse. Sass uses the `$` symbol to make something a variable. Here's an example:

### SCSS SYNTAX

Sass    SCSS    ⇒    CSS

```
$font-stack: Helvetica, sans-serif;  
$primary-color: #333;  
  
body {  
  font: 100% $font-stack;  
  color: $primary-color;  
}
```

When the Sass is processed, it takes the variables we define for the `$font-stack` and `$primary-color` and outputs normal CSS with our variable values placed in the CSS. This can be extremely powerful when working with brand colors and keeping them consistent throughout the site.

# JavaScript Primer

**If - Else**

```
if ((age >= 14) && (age < 19)) {           // logical condition
    status = "Eligible.";                   // executed if condition is true
} else {
    status = "Not eligible.";             // executed if condition is false
}

Switch Statement
switch (new Date().getDay()) {               // input is current day
    case 6:                                // if (day == 6)
        text = "Saturday";
        break;
    case 0:                                // if (day == 0)
        text = "Sunday";
        break;
    default:                               // else...
        text = "Whatever";
}
```

**Variables**

```
var a;                                     // variable
var b = "init";                            // string
var c = "Hi" + " " + "Joe";                // = "Hi Joe"
var d = 1 + 2 + "3";                        // = "33"
var e = [2,3,5,8];                          // array
var f = false;                             // boolean
var g = /()/.exec("abc");                  // RegEx
var h = function(){};
const PI = 3.14;                            // constant
var a = 1, b = 2, c = a + b;                // one line
let z = 'zzz';                             // block scope local variable

Strict mode
"use strict";   // Use strict mode to write secure code
x = 1;          // Throws an error because variable is not declared

Values
false, true;                                // boolean
18, 3.14, 0b10011, 0xF6, NaN;              // number
"flower", 'John';                           // string
undefined, null, Infinity;                  // special

Operators
a = b + c - d;                            // addition, subtraction
a = b * (c / d);                          // multiplication, division
x = 100 % 48;                             // modulo. 100 / 48 remainder = 4
a++; b--;                                 // postfix increment and decrement
Bitwise operators
```

**Basics**

**On page script**

```
<script type="text/javascript"> ...
</script>
```

**Include external JS file**

```
<script src="filename.js"></script>
```

**Functions**

```
function addNumbers(a, b) {
    return a + b; ;
}
x = addNumbers(1, 2);
```

**Edit DOM element**

```
document.getElementById("elementID").innerHTML = "Hello World!";
```

**Output**

```
console.log(a);                         // write to the browser console
document.write(a);                      // write to the HTML
alert(a);                               // output in an alert box
confirm("Really?");                    // yes/no dialog, returns true/false depending on user choice
prompt("Your age?", "0");              // input dialog. Second argument is the default value
```

**Comments**

```
/* Multi line
comment */
// One line
```

**Data Types**

```
var age = 18;                           // number
var name = "Jane";                     // string
var name = {first:"Jane", last:"Doe"}; // object
var truth = false;                     // boolean
var sheets = ["HTML", "CSS", "JS"];    // array
var a; typeof a;                       // undefined
var a = null;                          // value null
```

**Objects**

```
var student = {                         // object name
    firstName:"Jane",                  // list of properties and values
    lastName:"Doe",
    age:18,
    height:170,
    fullName : function() {           // object function
        return this.firstName + " " + this.lastName;
    }
};
student.age = 19;                        // setting value
student.age++;                          // incrementing
```

**Loops**

**For Loop**

```
for (var i = 0; i < 10; i++) {
    document.write(i + ":" + i*3 + "<br />");
}
var sum = 0;
for (var i = 0; i < a.length; i++) {
    sum += a[i];
}
// parsing an array
html = "";
for (var i of custOrder) {
    html += "<li>" + i + "</li>";
}
```

**While Loop**

```
var i = 1;                                // initialize
while (i < 100) {                         // enters the cycle if statement is true
    i *= 2;                                // increment to avoid infinite loop
    document.write(i + ", ");               // output
}
```

**Do While Loop**

```
var i = 1;                                // initialize
do {                                     // enters cycle at least once
    i *= 2;                                // increment to avoid infinite loop
    document.write(i + ", ");               // output
} while (i < 100)                         // repeats cycle if statement is true
```

**Break**

```
for (var i = 0; i < 10; i++) {
    if (i == 5) { break; }                  // stops and exits the cycle
    document.write(i + ", ");               // last output number is 4
}
```

**Continue**

```
for (var i = 0; i < 10; i++) {
    if (i == 5) { continue; }              // skips the rest of the cycle
    document.write(i + ", ");               // skips 5
}
```

**Strings**

```
var abc = "abcdefghijklmnopqrstuvwxyz";
var esc = 'I don\'t \n know'; // \n new line
var len = abc.length;        // string length
abc.indexOf("lmno");        // find substring, -1 if doesn't contain
abc.lastIndexOf("lmno");    // last occurrence
abc.slice(3, 6);            // cuts out "def", negative values count from end
abc.replace("abc", "123");  // find and replace, takes regular expression
abc.toUpperCase();          // convert to upper case
abc.toLowerCase();          // convert to lower case
```
